

CSE5041– Web Programming

(2021-2022 FALL)

Sudoku Project Presentation

Hello everyone, The subject of our project is Sudoku Game. Sudoku game is an intelligence game that everyone loves to play. We have developed this game on the ASP.NET MVC platform as beautiful as possible and made it available to our users.

Note: Blue Title > Enes 2000006890 Orange Title > Halil 1900001860

1-Meta Tags

Starting with the necessary "meta" tags and seo studies for our users who come to our project, which we also support in terms of SEO, with keywords such as "play sudoku game", "play sudoku online" from search engines, I begin to explain the part of my project within 5 minutes;

The first part is the meta tags, as I just mentioned;

Starting from the homepage of our project, I am going to examine its content.

2.Session Management (with all functions)

2-1. Register(Adding users)

When I try to go to the homepage, I see that I can't do this. Because only authorized users, that is, registered users, can play this game.

We record the security and game information of our users who visit our application within the scope of our privacy policies and terms of use. Thus, we provide a reliable quality experience for both our application and our users. (You can reach our privacy policy and terms of use from the link in the footer of our site.).

Then let's register to access the game. The user named "Enes", that is me, is in the role of administrator in this project. I will describe the types of roles and their usage in the next sections.

Let's register our project with a user named "Richard" in order to be more conspicuous.

I click on the "Register" button and fill in the necessary information.

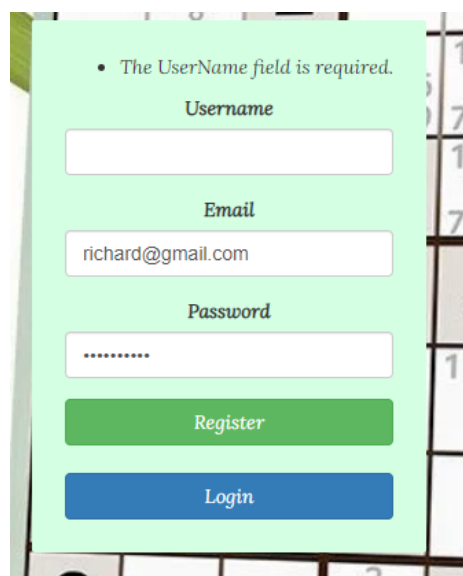

A login form is displayed over a background image of a calculator. The form has a light green background and contains the following elements:

- A green rounded rectangle at the top with the word "Login" in a large, black, serif font.
- A label "Username" above a white input field.
- A label "Password" above a white input field.
- A green button with the text "Login".
- A blue button with the text "Register", which is highlighted with a red rectangular border.

In cases where the information is not filled correctly, our application offers the necessary corrections to our users as you can see. I'm not going to show them all because I don't have time.

2-1.1. Form Control Input

1. Input boxes are not left blank..

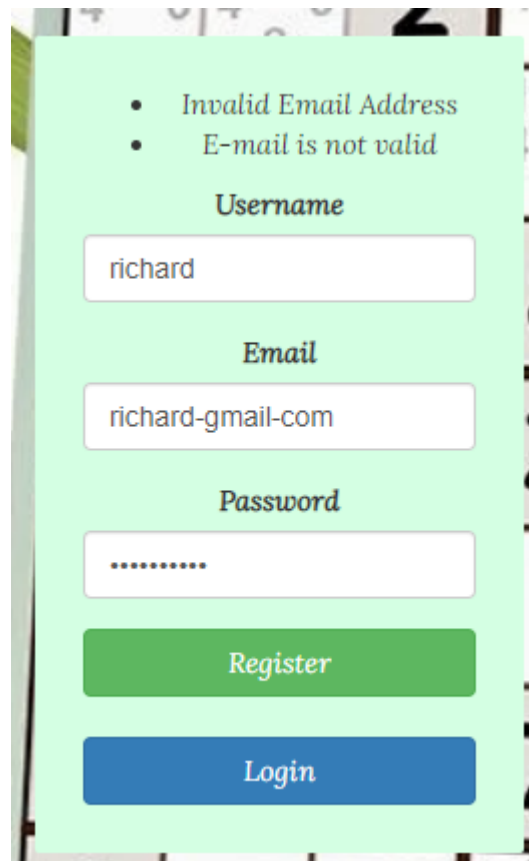

A registration form is shown with a light green background. At the top, a validation message is displayed:

- The UserName field is required.

The form includes the following fields and buttons:

- A label "Username" above a white input field.
- A label "Email" above a white input field containing the text "richard@gmail.com".
- A label "Password" above a white input field filled with dots.
- A green button with the text "Register".
- A blue button with the text "Login".

2. Email address must be entered in the correct format !

A registration form with a light green background. At the top, there are two bullet points: "Invalid Email Address" and "E-mail is not valid". Below these are three input fields: "Username" with the text "richard", "Email" with the text "richard-gmail-com", and "Password" with masked characters ".....". At the bottom are two buttons: a green "Register" button and a blue "Login" button.

- Invalid Email Address
- E-mail is not valid

Login

3. The Password must be at least 6 characters long !

A registration form with a light green background. At the top, there is one bullet point: "The Password must be at least 6 characters long.". Below this are three input fields: "Username" with the text "richard", "Email" with the text "richard@gmail.com", and "Password" with masked characters "...". At the bottom are two buttons: a green "Register" button and a blue "Login" button.

- The Password must be at least 6 characters long.

Password

Register

Login

As you can see, it is not possible to register in this way.

Now let's enter our information correctly and register in the system. Yes, the registration process took place and it directed us to the login page of our application for login. We are now registered in the system. Let's login with our information

A login form is displayed over a background image of a calculator. The form is a light green rectangle. At the top, the word "Login" is written in a large, black, serif font inside a green rounded rectangle. Below this, there are two input fields: "Username" with the text "richard" and "Password" with masked characters ".....". At the bottom of the form are two buttons: a green "Login" button and a blue "Register" button. The "Login" button is highlighted with a red rectangular border. The calculator background shows various numbers and symbols, including "4", "6", "1", "2", "5", "8", "3", "7", "8", and "9".

2-2. Home Page(Sudoku Game Page)

Now we have the authority to enter the system as a user and play our game. We also have an admin role, but I will explain it after our main topic, the sudoku game.

As you can see, the interface shows us the necessary information before starting the game.

Now, let's briefly explain these parts and move on to playing our game.

1. The name of our game
2. Welcome banner for our registered user
3. The username of our registered user
4. Logout button that our user will use to securely log out
5. The difficulty level of our Sudoku game consists of three levels. The first is easy, the second is medium, and the third is difficult. Accordingly, the sudoku game is played to the user according to that level.
6. The expected time for the user to finish the sudoku game
7. Another feature, There is a dark mode for users who want to play the Sudoku game in a dark environment, and a light mode for users who do not like dark mode.

Let's start a new game, play our sudoku game, and also examine our features.

We press our start a new game button

AND our game starts for our user. Our time has begun as you can see

1. This is the time we have to finish our game
2. This part is the user's right to put wrong numbers. Can place as many wrong numbers as the number here
3. Our Sudoku game itself
4. Here, the numbers that can be found in the sudoku game are listed below. When we think we have found one of these numbers, we drag and drop it into the relevant box as follows. Take care to make one more click while leaving, so that the system understands that you are sure.

Let's make an example. Let's knowingly insert an incorrect number

Timer: 02:46

Lives Remaining: 7

	8		7		1		3	
4		9						
	5			6		4	1	8
7					9			
8			6	1		5		
	3	5					2	9
	6		4		7		9	
1					8			4
	2			5			7	

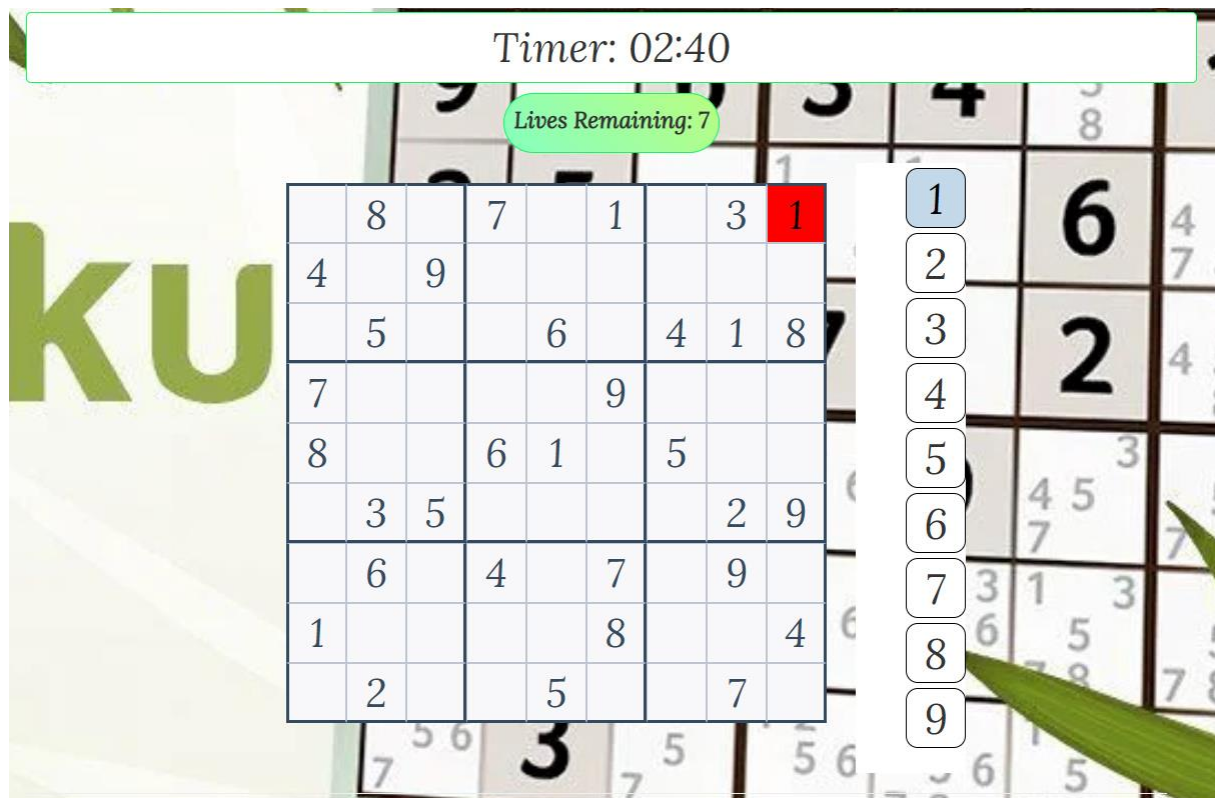

1	1
	2
	3
	4
	5
	6
	7
	8
	9

Timer: 02:44

Lives Remaining: 7

	8		7		1		3	1
4		9						
	5			6		4	1	8
7					9			
8			6	1		5		
	3	5					2	9
	6		4		7		9	
1					8			4
	2			5			7	

1
2
3
4
5
6
7
8
9

As you can see, when we enter the wrong number, it instantly tests and shows our user that the number is wrong.

The wrong number was one less as you can see about us.

Then our system removes the number in the box it has put, and immediately after that, the number it chooses removes the selection from the number it has chosen.

Now let's insert a correct number

Timer: 01:39

Lives Remaining: 7

6						7	
				5		2	
				1			
3	6	2				8	1
		9	6				
7	1			9		4	5
	2			6	5	1	
		7	8				3
4	5						

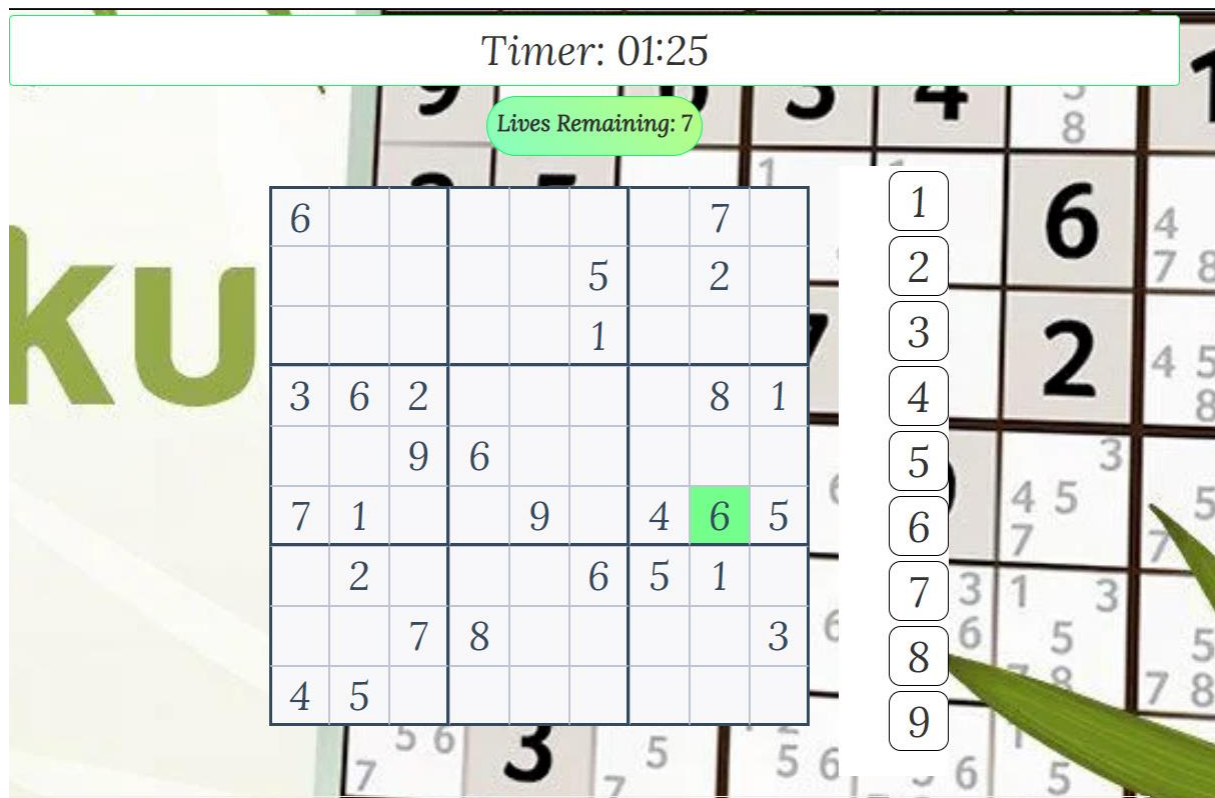

Number list: 1, 2, 3, 4, 5, 6, 6, 7, 8, 9

Timer: 01:32

Lives Remaining: 7

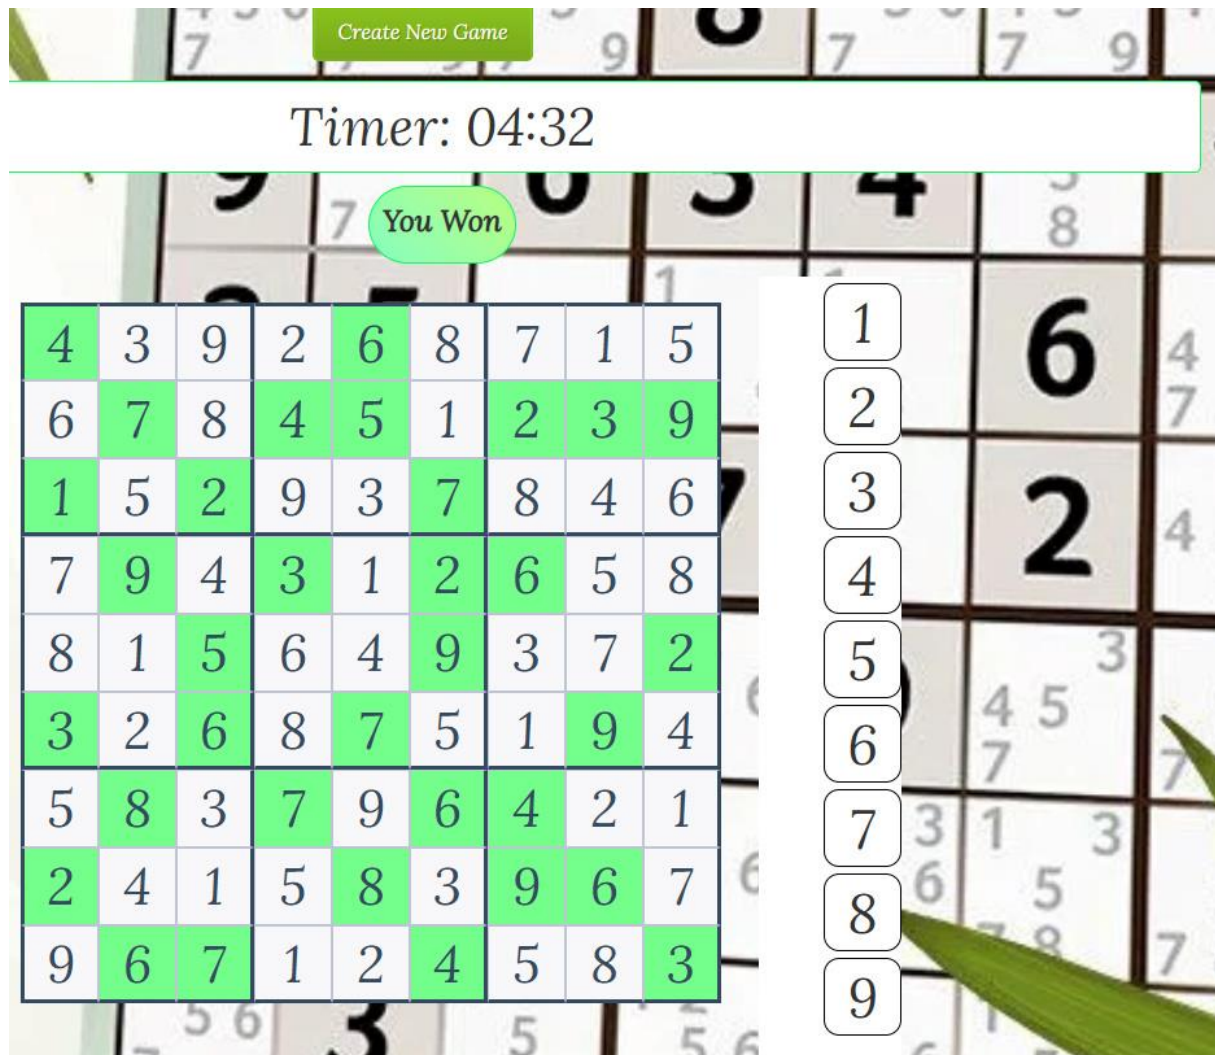

6						7	
				5		2	
				1			
3	6	2				8	1
		9	6				
7	1			9		4	6
	2			6	5	1	
		7	8				3
4	5						

Number list: 1, 2, 3, 4, 5, 6, 6, 7, 8, 9

Of course, before our time runs out, we must know all of them correctly in this way so that we can win the game. Of course we won't finish now.

A finished sudoku is available in my documentation. You can review it later.

If we can't finish the game within the given time, it will be You Lost.

If we can finish the game within the given time and enough about us in this situation we win the Game So You win

You can also play this game in the dark theme. I won't be playing again because I have little time.

Sudoku

Welcome

Richard

3. Footer

There is a footer at the bottom of our website. Our site is mobile friendly. The footer is divided into four sections

sudoku.com

Sudoku

Sudoku is one of the most popular games of all time. The purpose of Sudoku is to fill with 9x9 square number. The row, column and 3x3 partitions 1 to 9 in the array would contain all terms. Sudoku is an excellent brain game. If you play Sudoku every day, the expectation on the agenda and in your brain in general. In short, Sudoku will become your favorite free internet game.

Social Media

Contact

Your opinions and suggestions are important to us. You can send your comments and suggestions about the Sudoku game to info@sudoku.com. You can also reach us through our social media accounts.

3.1. One Section

The first part is the site logo and just below the site address. These values are fixed in our mvc project. This way we can use it anywhere.

3.2. Two Section

In the second part, there is an explanation about the game.

3.3. Three Section

In the third part, there are social media buttons. When these buttons are hovered, a stylish appearance is given with a rotating effect.

3.4. Four Section

In the fourth part, if the user wants to contact us, we inform him about forwarding to our e-mail address under the website domain, where he can reach him.

3.4. CopyRight Section

It is divided into two parts. On the left are the site certificate information and on the right are the terms of use and privacy policy.

4. Term of Use Page

As I mentioned at the beginning of my speech, the terms of use are the set of rules that legally protect this service (Sudoku game) that both the user and the website owners offer and receive.

Click on the Term of Use link in the Footer section. We see that the terms of use are opened in the new tab

TERMS OF USE

Terms and Conditions

Welcome to sudoku.com!

These terms and conditions outline the rules and regulations regarding the use of sudoku.com's Website located at <https://sudoku.com>.

By accessing this website, we assume that you accept these terms and conditions. If you do not agree to all the terms and conditions stated on this page, do not continue to use sudoku.com.

The following terminology applies to these Terms and Conditions, Privacy Notice and Disclaimer, and all Agreements: "Customer", "You" and "Your" means you, the person logging into this website and in accordance with the Company's terms and conditions. "Company", "Ourself", "We", "Our" and "We" refer to our Company. "Party", "Parties" or "We" refers to both the Customer and ourselves. All terms refer to the Company's offer, acceptance and consideration of the payment necessary to undertake the process of assisting the Client in the most appropriate manner in order to meet the Client's needs in relation to the provision of the specified services, and subject to applicable Dutch law. The use of the above terminology or other words in the singular, plural, uppercase and/or words can be used interchangeably and therefore have the same meaning.

Cookies

We use the use of cookies. By accessing sudoku.com, you agree to use cookies in accordance with sudoku.com's Privacy Policy.

Most interactive websites use cookies to allow us to retrieve the user's details for each visit. Cookies are used to provide the functionality of certain areas to make it easier for people who visit our website to visit our website. Some of our affiliates / advertising partners may also use cookies.

License

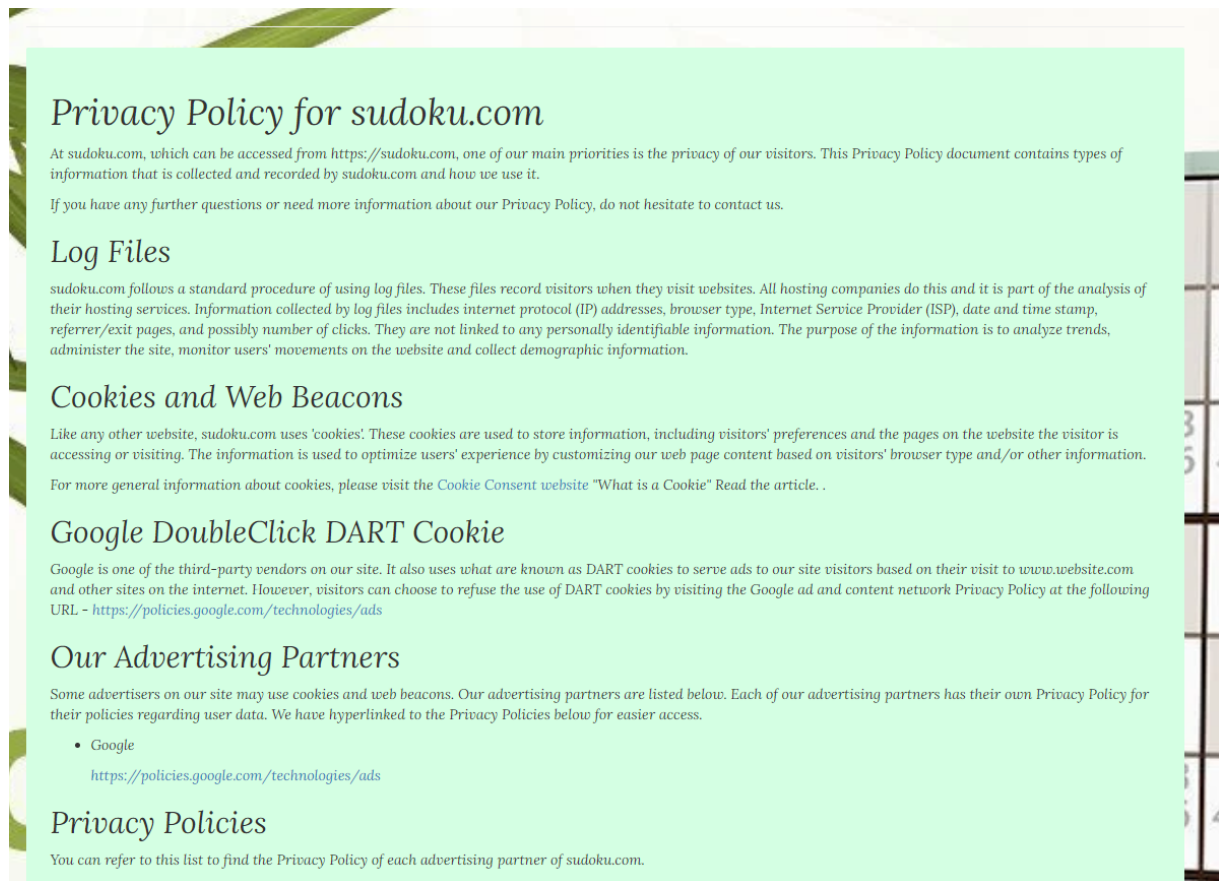

Unless otherwise stated, sudoku.com and/or its licensors own the intellectual property rights in all materials on sudoku.com. All intellectual property rights reserved. You can access it at sudoku.com for your own personal use, subject to the restrictions set in these terms and conditions.

You shouldn't:

- Republish the material at sudoku.com
- Selling, renting or sublicensing the material from sudoku.com
- Duplicate, reproduce or copy materials on sudoku.com
- Redistribute content from sudoku.com

5. Privacy Policy

We have not used third party applications on our website, but we need to show the user that we have the right to use them. When our website is published, we can receive and place advertisements from Google AdSense or another platform. We must legally inform the user that we have all these and similar rights.

Since session management is my own, I want to show the necessary role model concepts

2-3. Role Model(Adding users and Adding Admin)

There are two role models in our project. One of them is User and the other is Admin.

Richard registered in the system does not have either of these roles. Because Richard is a foreigner and obviously change :). It could be a malware bot. Therefore, our Administrator, that is, I must check the user information and decide whether Richard can have the user role in the system.

Let's write role/Admin to the url address as follows..

We wrote, but we did not come across roleModels as we wanted.

Even if Richard was user, he still wouldn't be able to access it. Because Richard is not an admin.

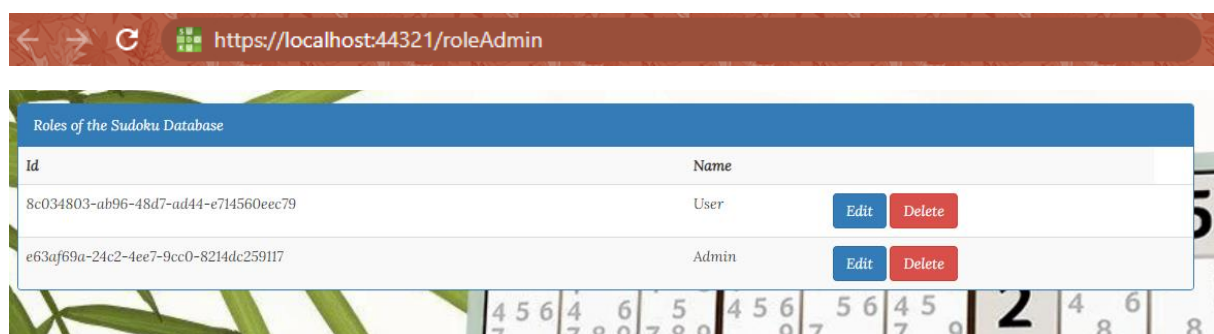

Now we log out from the log out button on the homepage and then log back in with Enes.

We logged in and it redirected us to the homepage. Now let's see our Role models as admin

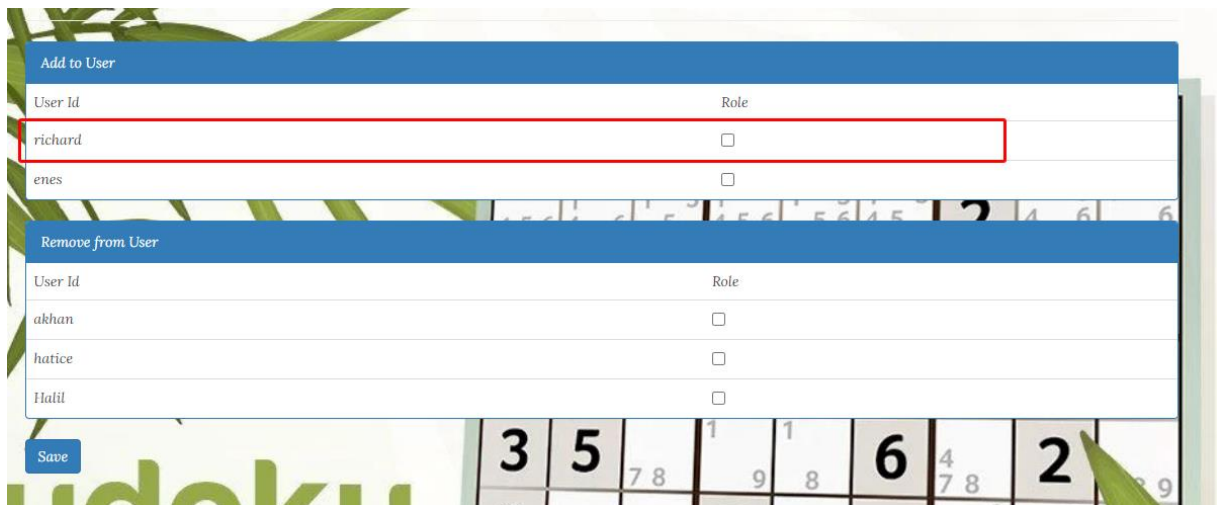

Let's rewrite the address we couldn't enter.

Now, let's access the Edit Section, where the operations belonging to the Users Role are. Of course, models for this role can be deleted if desired, and a new one can be added, of course, we will not touch it because we have users registered in the system.

Click on the Edit button on the User line.

Anyone (including me) who doesn't have the Users role will appear in the list. I can assign the person I want from this list as users. The person Richard then becomes a truly reliable account. Because the users role is assigned.

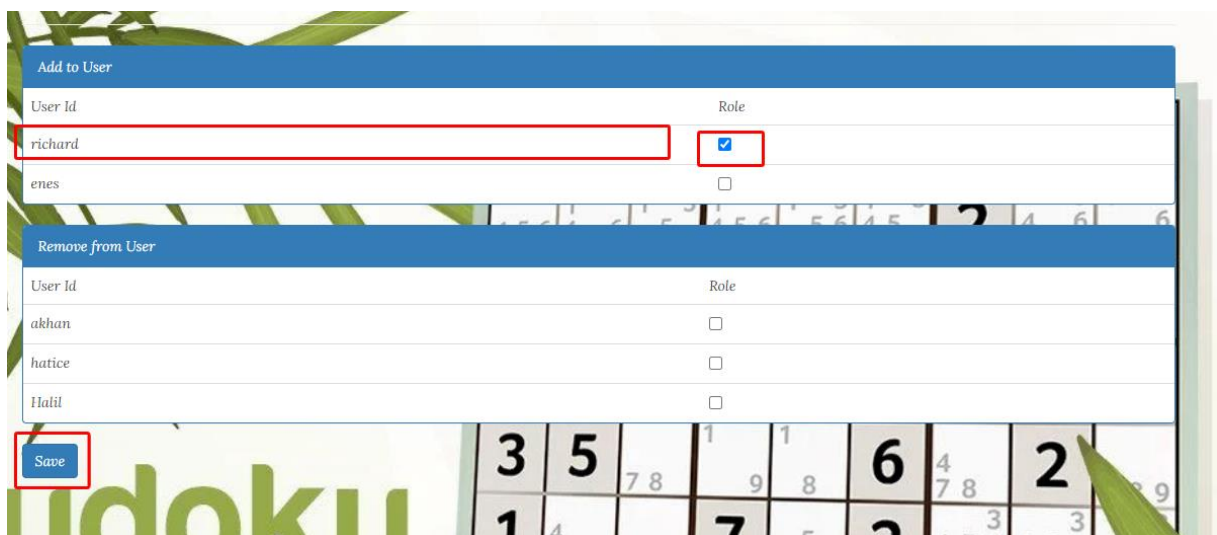

The screenshot shows a web interface with two sections: 'Add to User' and 'Remove from User'. Both sections have a table with 'User Id' and 'Role' columns. In the 'Add to User' section, the user 'richard' is highlighted with a red box, and its corresponding checkbox is also highlighted. The 'Remove from User' section lists 'akhan', 'hatice', and 'Halil', each with an unchecked checkbox. A blue 'Save' button is located at the bottom left of the 'Add to User' section.

User Id	Role
richard	<input type="checkbox"/>
enes	<input type="checkbox"/>

User Id	Role
akhan	<input type="checkbox"/>
hatice	<input type="checkbox"/>
Halil	<input type="checkbox"/>

Save

Let's do what we say, I tick the checkbox opposite Richard and press the save button for Richard. Richard is now a user

This screenshot shows the same interface as the previous one, but with the checkbox for 'richard' now checked and highlighted with a red box. The 'Save' button at the bottom left is also highlighted with a red box. The 'Remove from User' section remains unchanged.

User Id	Role
richard	<input checked="" type="checkbox"/>
enes	<input type="checkbox"/>

User Id	Role
akhan	<input type="checkbox"/>
hatice	<input type="checkbox"/>
Halil	<input type="checkbox"/>

Save

Richard has been added to accounts with the user role in the table below

Add to User	
User Id	Role
enes	<input type="checkbox"/>

Remove from User	
User Id	Role
richard	<input type="checkbox"/>
akhan	<input type="checkbox"/>
hatice	<input type="checkbox"/>
Halil	<input type="checkbox"/>

Richard, akhan, hatice and halil seen in the table below are the user accounts of the system. I (Enes) are in the role of admin, of course, I am not on this list

We go back to our role table, this time we look at the admin role functions.

Roles of the Sudoku Database		
Id	Name	
8c034803-ab96-48d7-ad44-e714560eec79	User	Edit Delete
e63af69a-24c2-4ee7-9cc0-8214dc259117	Admin	Edit Delete

All non-admin users appear in the first table. Now let's make akhan an admin

Add to Admin	
User Id	Role
richard	<input type="checkbox"/>
akhan	<input type="checkbox"/>
hatice	<input type="checkbox"/>
Halil	<input type="checkbox"/>

Remove from Admin	
User Id	Role
enes	<input type="checkbox"/>

Save

Add to Admin	
User Id	Role
richard	<input type="checkbox"/>
akhan	<input type="checkbox"/>
hatice	<input type="checkbox"/>
Halil	<input type="checkbox"/>

Remove from Admin	
User Id	Role
enes	<input type="checkbox"/>

Save

We see that the akhan user is listed in the bottom table, now akhan and I are admins

Add to Admin	
User Id	Role
richard	<input type="checkbox"/>
hatice	<input type="checkbox"/>
Halil	<input type="checkbox"/>

Remove from Admin	
User Id	Role
akhan	<input type="checkbox"/>
enes	<input type="checkbox"/>

Save

By the way, let's pay attention to Richard's position.

In this way, an environment in which only authorized (Admin) users can manage the users in our project has been provided.

We have come to the end of the section reserved for me (Enes)

Let's continue with the presentation of my teammate Halil.

Note: Halil had no contribution to the project.

**HOCAM AŞAĞIDA GÖREV AYRIMLARIMIZ AÇIKÇA
BELLİDİR. NOTLANDIRIRKEN BUNA BAĞLI KALIRSANIZ
SEVİNİRİM. SAYGILARIMLA ENES**

CSE 5001 WEB TASARIM

ENES

- 1. Sudoku Oyunu komple yapımı**
- 2. Footer**
- 3. Oturum açma(Hertürlü işlevi ile)**
- 4. Terms(Kullanım Şartları) Sayfası**
- 5. Cookie Policy (Çerez Politikaları) Sayfası**
- 6. Privacy(Gizlilik Politikası Sayfası)**

HALİL

- 1. Navigation Bar**
- 2. Dil desteği(İngilizce,Almanca,Türkçe)**

Sadece İngilizce Almanca ve Türkçe dilleri olsa yeterli. Dil seçimi navigation bar açılır menüsünden seçildiği anda sayfa ilgili sayfaya yönlendirilmeli.

Url adresinde ör: sudoku.com/tr ör:sudoku.com/en gibi yönlendirme ile dil değiştirmeli. Mümkünse veritabanından bilgiler çekilsin. Ona bağlı veritabanı tabloları oluşturulmalı. Veriler eklenmeli sonra Ms sql de görülen tablolardaki verilerden çekerek o veriler gösterilmeli. Sadece anasayfa için bunu yapsan yeterlidir. Zaten gizlilik sayfaları sadece İngilizce olur o nedenle sadece anasayfada çalışsın.

Buna bağlı class diagramın olsun arasındaki ilişkiler görünsün.

- 3. Sosyal medya**

Navigasyonda Sosyal medya açılır menüsü olsun. Menüler iconlu olsun yani face twitter iconları olsun. İconlar tıklayınca gerçekten sosyal medyalara gitsin fakat yeni hesap açma var olana yönlendir uğraşmana gerek yok bence.

4. İLETİŞİM SAYFASI

<https://htmlcssdersleriogreniyorum.com/iletisim>

Bu site bana ait. Buradaki iletişim sayfasını yapabilirsin. İletişim sayfasında; İletişim formu olabilir, sitede gördüğün gibi sosyal medyadan canlı kesit olabilir. Harita koyma çünkü yorarsın siteyi. Çalışır form ve bilgi koysan yeter biraz. “Aşağıdaki formdan bize ulaşabilirsiniz” tarzında birde form yeter. Formdaki veriler veritabanına kaydedilmeli. Yinde veritabanının diagramı olmalı. Formun javascript ile jquery ile form inputları kontrol edilebilir.

5. Hakkımızda Sayfası

Bildiğin hakkımızda sayfalarından güzel bir tane nasıl istersen ayarlarsın. Taglara h1 h2 lere dikkat edersin. Burasını örnek sudoku sayfalarının hakkımızda kısımlarına bakarak yazarsın. Çok uzun olmasına gerek yok.
